**CPR and AED
Instructor Resource Kit**
Product #73065-0000

Almost every two minutes, someone dies of sudden cardiac arrest. Automated external defibrillation (AED) could save a quarter of these lives. AED devices are showing up everywhere from industrial settings to shopping malls, and the demand for training is rising. Fortunately, the number of people trained in cardiopulmonary resuscitation (CPR) grows every year too.

National Safety Council® programs offer the very latest techniques and follow the latest guidelines for CPR. And now we use Video-Self-Instruction (VSI) to increase retention of the techniques.

Our CPR and AED program teaches the average person the basics of emergency life support and takes the fear out of AED use. We give you all the background information and skills testing you need to feel confident in the event of an emergency—and help save a life.

If you want to learn CPR and AED, the National Safety Council has you covered. In just 3 1/4 hours, anyone can learn how to recognize an emergency, act appropriately and sustain life until professional help arrives.

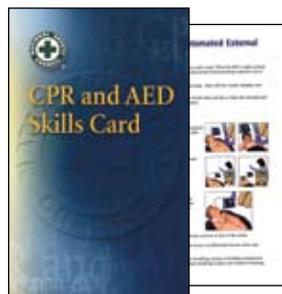

If you want to teach CPR and AED, the National Safety Council is the smart choice. If you're already an instructor with another program, NSC® can grandfather you in. Or, you can become an authorized NSC emergency care instructor in as little as 3 days.

Our instructor materials make it easy for anyone to start teaching. Your instructor resource kit comes complete with an instructor manual, instructor CD, CPR/AED presentations on DVD and a student manual. You'll also get exclusive product pricing with NO annual fees and much more!

CPR skills are taught using VSI. With VSI, students practice CPR at the same time it's demonstrated on the video, taking their cues from the rescuer on the screen. VSI is shown to result in better CPR skills acquisition and retention than traditional teaching methods. The technique helps you provide consistent instruction for all students and stick to a tight teaching schedule.

CPR and AED Student Manual

Each participant receives a 32-page student workbook with full-color photos, illustrations and skills demonstrations. Globally recognized course completion cards are included.

CPR and AED Skills Card

This full-color, eight-panel laminated card offers a convenient and quick review of skills. Available with a completion card for individuals who have taken an NSC CPR and AED course and are looking for refresher training or without a completion card to serve as a valuable employee handout.

Topics include

- Acting in emergency situations
- Recovery position
- Preventing disease transmission
- Choking
- Checking the victim
- CPR (adult, child and infant)
- Using an AED
