NSC Safety System Assessment

Powered by NSC Navigator

Measure comprehensively. Act purposefully.

How does your safety program measure up? On the journey of continuous improvement, benchmarking is a crucial strategy to include in measurement of safety performance. The NSC Safety System Assessment provides an opportunity to evaluate your own program and understand how it compares to others, enabling you to see what you're doing well, and what areas may need to be targeted for further improvement.

With the NSC Safety System Assessment, you get:

- A FREE benchmarking measurement tool to help improve your safety program at a single location
- A valid survey instrument rooted in research and tested in practice
- A thorough analysis of the eight safety program categories outlined in the Journey to Safety Excellence:

Management Leadership & Commitment
Motivation, Behavior, & Attitudes
Workforce Involvement
Operational Processes & Procedures
System Management & Communication
Training & Orientation
Hazard Identification & Risk Reduction
Assessment, Audits, & Performance Measures

- Your results compared against the NSC Database of nearly 500 companies
- An opportunity to set a baseline measurement against which future improvements can be gauged.

Measure comprehensively

The 69-question NSC Safety System Assessment is a self-reporting tool designed to be completed by the person responsible for safety. Because it is cloud-based, your data and results are stored and accessible for future use and reassessment.

Results include:

- Item benchmarking analysis of scores on all 69 questions compared to the database
- Category benchmarking analysis for each of the 8 safety program categories in the Journey to Safety Excellence model
- Benchmarking of your overall score compared to hundreds of other companies that also completed the self-assessment

Green bars indicate responses in the top 25% of all assessments in the NSC Database – high performance worth replicating in other areas of the company.

Yellow bars indicate responses greater than the 50th percentile but less than the 75th percentile – good performance but areas to monitor and improve.

Red bars indicate responses lower than the 50th percentile – less than average performance and areas likely to need immediate attention.

Percentiles ranging from 0 to 100 express the percentage of organizations in the NSC Database with lower average responses than recorded in this survey.

Percentile scores of responses to groups of questions regarding a single safety program category.

Act purposefully

Move forward on your Journey to Safety Excellence! Results from your NSC Safety System Assessment can be used to develop plans for improvement in one or more categories or even individual items. With your results in hand, you'll be able to act with purpose, knowing you've identified and are addressing safety vulnerabilities within your company.

Don't wait! Access the NSC Safety System Assessment today. Visit nsc.org/journey to get started with your own FREE assessment. It's that simple!

Additional resources

For additional analysis of your safety system, NSC offers in depth employee perception surveys as well as consulting services to help make your results not only meaningful, but actionable. Find out more when you visit nsc.org/surveys.

Visit nsc.org/members_get_more to see why more than 51,000 members have joined NSC. As an NSC member, you can take advantage of resources designed to guide you and help keep your employees safe.
