

# NSC Construction & Utilities Division

## Did you know?

Following highway crashes, **falls from heights** is the second leading **unintentional fatal workplace event.**

In fact, falls are the leading cause of death among construction workers. But falls don't have to happen. Employers need to ensure workers are properly trained and equipped to perform work safely when working at heights.

The **National Safety Council Construction & Utilities Division** is working to ensure every employer in the industry has the information and tools they need to keep their workers safe – whether they are working on scaffolding, an I-beam or on a pole.
