

# NSC Consulting Services

## Customized Solutions for Your Organization

Motivated to make improvements to your safety program but don't know where to start? Let NSC guide the process for you.

Our NSC safety experts have worked with hundreds of organizations with as few as 100 and as many as 40,000 employees, across numerous industries, to provide solutions tailored to their needs.

Whether it's co-developing a policy or procedure, setting up an effective safety management system, assessing your current program, or a 'mock' compliance audit, NSC works directly with organizations to meet their needs and requirements through a collaborative partnership.

### Our full-service solutions include

1. Safety Management System (SMS) Assessments
2. Regulatory Compliance Audits
3. "Mock" compliance audits and inspections
4. Safety Culture Assessments
5. Ergo Assessments
6. Risk Assessments
7. Supervisors' Safety Development Program (SSDP)
8. Incident Investigation
9. Injury and Illness Prevention Programs
10. Behavior-based program planning
11. Process Safety Management - Gap Analysis
12. Technical Manuals/Books/Periodicals
13. A variety of training from train the trainer to online training

### Count on our Expertise

NSC has dedicated subject matter experts (SMEs) in-house to help ensure that your organization succeeds on its journey to safety excellence. Safety is a global business - NSC can consult and execute projects both domestically and internationally.

## Sample Safety Management System Assessment

Our Safety Management Assessment will:

- Provide an objective overview of the effectiveness of your current safety management system
- Benchmark current performance while identifying and prioritizing areas for improvement
- Offer specific suggestions and tools to enhance your current safety management system

### A typical assessment includes

1. Planning Conference
2. Administrative Orientation
3. Program Assessment
4. Conclusions and Recommendations

But, this is only the beginning. Organizations with successful safety management systems will need to continue the hard work well beyond this session. Organizations should be committed to an ongoing safety culture and adapt plans accordingly based on movements in the safety program - what works, what doesn't work, what actions need to be modified? Safety is a continuous process that needs full support and commitment from all levels of the organization on a regular basis.
