

Training that helps you meet
federal industry guidelines

National Safety Council Workzone Training:

Certify your employees today with flagger training that meets federal industry guidelines.

Construction, maintenance and utility work zones are hazardous places where flagger and safety training can make a life-or-death difference. That's why the National Safety Council developed the following comprehensive, skill-building training you and your crew need to save lives.

The National Safety Council can help train your staff on how to provide safe passage of traffic through and around work areas, as well as tactics for minimizing driver confusion. NSC programs can get your crew members trained and certified in safe flagging techniques quickly and affordably.

NSC Flagger Training is based upon the Manual on Uniform Traffic Control Devices (MUTCD) and meets the federal industry guidelines. This course has also been reviewed by numerous State Departments of Transportation.

Workzone Flagger Training

The National Safety Council's Flagger Training Programs are nationally recognized and meet or exceed both the MUTCD (Manual on Uniform Traffic Control Devices) guidelines and the ANSI standard ISEA-107-2004 to keep your crew and motorists safe. Get certified to deliver the Flagger Training Course to your work zone crews or send them out to training.

- **Flagger Training Course** This course is designed for the novice flagger working a 1-to-2 person operation seeking training and certification. Experienced flaggers should take the course for credential renewal. (4 hours)
- **Flagger Instructor Course** Improve skills as an instructor by learning content and tips to deliver the 4-hour Flagger Training Course to your crew (2 days)

Temporary Traffic Control - Design & Supervision

Based on the most current federal regulations and reviewed by leading industry experts, this program prepares workzone supervisors to interpret, adapt and implement traffic control plans. Based on real-world situations, you're led through problem-solving exercises, using the MUTCD and state guidelines.

- **Temporary Traffic Control Design and Supervision** Attendees will learn how to interpret, adapt, evaluate and establish Traffic Control Plans according to the federal guidelines in the Manual on Uniform traffic control devices (MUTCD). (2 days)
