# Safety Inspections

## Techniques to find root causes of safety issues

### Safety Inspection

In this one-day course, you will learn how to positively reinforce safe practices by focusing on root causes as opposed to faults. Anyone who conducts or supervises safety inspections or does industrial safety or health inspector training should attend.

### What you'll learn

- Understanding the purpose and benefits of safety inspections
- Planning and conducting an effective safety inspection
- Using checklists to save time and improve inspection quality
- Communicating results through a written inspection report
- Developing recommendations and following-up on implementation
- Setting realistic goals and holding employees accountable for effective results
- Managing an effective safety inspection program that identifies hazards before they cause problems

### Course description

This course addresses basic skills for conducting various types of inspections and correcting identified hazards. Discussions, demonstrations and exercise will teach you what to inspect, how often and who should be involved. The focus is on finding facts, not faults, and how to use safety inspections to positively reinforce safe practices and behaviors.

### Course materials

- Participant Guide

### Who would benefit

- Safety managers
- Coordinators
- Specialists
- Other full-time safety practitioners
- Safety committee members
- Operations managers
- Loss control managers
- Human resources professionals
- Anyone with safety responsibilities

### \* Continuing Education Unit

A Continuing Education Unit (CEU) is a measure of participation in a recognized continuing education program with qualified instruction and sponsorship. CEU records are widely used to provide evidence of completion of continuing education requirements mandated by certification bodies, professional societies or government licensing boards.
