

GHS for Hazard Communication

Incorporating the updated GHS Hazard Communication into your workplace

GHS for Hazard Communication is newly revised to incorporate the GHS standard. It is designed to protect employees from hazardous chemicals used or stored in the workplace. This program provides an easy and effective way to communicate the new hazard standards while engaging all employees in the continuous improvement of their safety culture.

What you will learn

- OSHA Hazard Communication (2012) 1910.1200 Subpart Z
- Hazard Communication programs
- Labeling hazardous materials with the revised/updated label content
- GHS and the new Safety Data Sheet System

Course description

GHS for Hazard Communication is designed to increase an employee's ability to quickly understand critical safety information for the new standardized process of GHS Hazard Communication. You will improve the quality and consistency of classifying and labeling hazardous chemicals. This program is designed to help employees understand GHS hazard classification, container labeling, and safety data sheets.

Course materials

- Participant Guide (5)
- Facilitator CD (1)

Who would benefit

- Any employee who comes in contact with a hazardous chemical
- Chemical manufacturers, importers, and distributors
