

Electrical Safety

How to protect your employees from electrical hazards

This course is written to instruct employees to understand OSHA 1910 Subpart S requirements. Your employees will be able to understand key elements of the OSH regulations so that they will be able to recognize and correctly use key terms and concepts related to electrical safety. This course focuses on protecting employees exposed to electricity and how to eliminate the potential electrical dangers.

What you will learn

- Differentiate between qualified and unqualified workers in order to identify appropriate training and protection requirements
- Subpart S, NFPA 70, and NFPA 70E
- Recognize the importance of electrical safety related work practices
- Recognize and correctly use key terms and concepts related to electrical safety

Course description

This course will help you instruct your employees to differentiate between qualified and unqualified workers in order to identify appropriate training and protection requirements. They will be able to recognize how Subpart S, NFPA 70, and NFPA 70E are related and intertwined. By the end of this course your employees will identify practices and procedures to protect employees who work on or near to electric conductors and equipment from the electrical hazards associated with this type of work.

Course materials

- Participant Guide (5)
- Facilitator CD (1)
