I. Introduction

As the Hispanic population in the United States continues to increase, so do concerns about the environmental health and safety of Hispanic workers, families, and children across the country. Many Hispanics in the United States lack basic health insurance, while often working jobs that expose them to greater environmental and safety hazards than the rest of the population. Hispanic populations are also more likely than whites to live in low-income areas where environmental factors can increase risks for childhood diseases such as lead poisoning and asthma.

The good news is that many community-based organizations (CBOs) have formed to address these pressing issues of Hispanic environmental health and worker safety. To bring together these diverse groups to discuss some of the issues of greatest concern to Hispanics in the Americas, several governmental and non-governmental organizations organized the First Hemispheric Forum on Hispanic Health and Safety in October 2000. Held in conjunction with the National Safety Congress in Orlando, Florida, the Forum brought together CBOs and other organizations from across the United States and Latin America to discuss issues and potential ideas related to occupational safety and health, environmental health, and international workers. One of the suggestions to come out of that Forum was the creation of an "operations manual" that would help Hispanic CBOs grow, thrive, and find the financial and technical resources available to address pressing environmental health and safety issues.

The purpose of this manual is to be a living document for Hispanic CBOs. Tables of governmental and non-

governmental resources are included to help organizations identify sources of educational materials and funding on Hispanic issues, occupational safety, and environmental health. Even with these resources, however, CBOs need to be healthy themselves to survive. This manual includes basic "how-tos" for fledging CBOs, from how to start a nonprofit, assess needs, and write grants to the importance of building partnerships and measuring progress. Examples of CBOs that have used grants to accomplish results are included, as is a glossary of key organizational, safety, and environmental health terms.

The Hispanic Forum would like to thank the following organizations, which helped make this manual possible by providing resources, input, and information available via Web sites, published materials, and participation in the Forum:

- Boardsource (formerly the National Center for Nonprofit Boards)
- The Foundation Center
- U.S. Department of Health and Human Services' GrantsNet and Office of Minority Health
- Francisco Tomei-Torres, U.S. Agency for Toxic Substances and Disease Registry
- Healthy People 2010

Portions of this manual were developed and abridged directly from resources from these organizations with their permission.

II. Take Action: Tips and Strategies for Gathering Resources

From creating and incorporating a nonprofit organization to obtaining grants and measuring progress, the following section outlines steps to help Hispanic CBOs address environmental and occupational health and safety issues in their communities. Additional sources of this information can be found in Section VI.

Forming a Nonprofit Organization¹

If you've put some thought into your community's environmental health and safety concerns, and met a few times with people who share those concerns, you probably already have created an informal networking group. The challenge is to turn that loose association into an organization with a concrete vision and the means to effect real change. Following are some key questions to answer as you consider forming a nonprofit organization in your community:

✳ **Is there a need for the new organization?**

This is the most important question to answer. Is anyone else providing the same or similar service in your community? Do some research—get to know the programs that already exist, whom they serve, and how well they serve them. If similar programs are already operating, but you believe they could do a better job, be sure you understand where they are failing and how your new organization could do better.

✳ **Do you have supporters?** Don't go it alone. Talk to people about your ideas. Enlist their support as both volunteers and contributors. If finding supporters is difficult, your idea might need improvement or just not be appealing to those whom you will need to turn to for help.

✳ **Where will you get the money to pay the bills?** You can start a nonprofit organization for very

little money, but it will take some financing. For example, where will the service be provided? Will you rent space or work from your home? If you plan to be the primary provider of services, how will you support yourself while you build the organization? Foundation grants for start-up organizations are hard to find. If you hope to find grants in the beginning, two important factors will have to be in place: you must be filling a strong and compelling need, and you must have the proper experience and background to bring credibility to your idea.

✳ **What makes you the best person to do this job?** Dedication and desire are important elements, but are not enough to succeed at building a nonprofit. Have you been working in this field? Do you have an understanding of your potential clients? Have you had special training? Are there licensing requirements in your city or state that you must meet?

✳ **Do you have a plan?** It is not enough to just have the idea in your head. Before you do anything else, you'll need to write a business plan that includes the answers to the previous questions.

Spend time thinking about and answering these questions before you establish the organization and apply for tax-exempt status. It will make the path easier and increase your chances of success.

Incorporating Your Nonprofit Organization²

Perhaps you have already been functioning informally as an effective group in your community; is your organization now ready to take its mission to a new level? If you have successfully established needs and concerns, mobilized the community behind your vision, and proven your ability to effectively achieve results, you might want to consider obtaining a more official status for your organization.

An incorporated nonprofit organization must have a carefully developed structure and operating procedures to be effective. Good governance requires solid legal and financial status and compliance with the numerous federal, state, and local requirements affecting nonprofits. Below is a checklist for the formation of an official nonprofit organization.

- **Determine the purpose of the organization.** Every organization should have a written mission statement that expresses its reason for being. Sources of this information can include board members, potential clients, and constituents.
- **Form a board of directors.** The initial board will help the ideas behind the organization become reality through planning and fundraising. As the organization matures, the nature and composition of its board will also change.
- **File articles of incorporation.** Not all nonprofits are incorporated. For those that do wish to incorporate, the requirements for forming and operating a nonprofit corporation are governed by state law. Your secretary of state or state attorney general's office can provide you with more information.
- **Draft bylaws.** Bylaws—the operating rules of the organization—should be drafted and approved by the board early in the organization's development. An attorney experienced in nonprofit law can help you establish bylaws.
- **Develop a strategic plan.** The strategic planning process helps you express a vision of the organization's potential. Outline the steps necessary to work

toward that potential, and determine the staffing needed to implement the plan. Establish program and operational priorities for at least one year. Board members and planning and management consultants can help you develop this plan.

- **Develop a budget and resource development plan.** Financial oversight and resource development (e.g., fundraising, earned income, and membership) are critical board responsibilities. The resources needed to carry out the strategic plan must be described in a budget and financial plan, which a financial consultant can help you develop.
- **Establish a recordkeeping system for the organization's official records.** Corporate documents, board meeting minutes, financial reports, and other official records must be preserved for the life of the organization. Your secretary of state or state attorney general's office can help.
- **Establish an accounting system.** Responsible stewardship of the organization's finances requires establishing an accounting system that meets both current and anticipated needs. For more information, talk to a certified public accountant experienced in nonprofit accounting.
- **File for an Internal Revenue Service (IRS) determination of federal tax exempt status.** Nonprofit corporations with charitable, educational, scientific, religious, or cultural purposes have tax-exempt status under section 501(c)(3)—or sometimes section 501(c)(4)—of the Internal Revenue Code. To apply for recognition of tax-exempt status, obtain an application (Form 1023) and detailed instructions (publication 557) from your local IRS office. The application is an important legal document, so you should have an experienced attorney help prepare it.
- **File for state and local tax exemptions.** In accordance with state, county, and municipal law, apply for exemption from income, sales, and property taxes. Visit your state, county, or municipal department of revenue for more information.

²Excerpted from the BoardSource Web site's Frequently Asked Questions page, <www.boardsource.org/intel/qaf7.htm>. BoardSource, formerly the National Center for Nonprofit Boards, is the premier resource for practical information, tools, best practices, training, and leadership development for board members of nonprofit organizations worldwide.

- **Meet the requirements of state, county, and municipal charitable solicitation laws.** Many states and local jurisdictions regulate organizations that solicit funds within that state, county, or city. Compliance usually involves obtaining a permit or license and then filing an annual report and financial statement. Visit your state attorney general's office, state department of commerce, state or local department of revenue, or county or municipal clerk's office for more information.

Other steps:

- Obtain an employer identification number from the IRS.
- Register with the state unemployment insurance bureau.
- Apply for a nonprofit mailing permit from the U.S. Postal Service.
- Obtain directors' and officers' liability insurance.

Assessing Needs and Setting Priorities³

To get a better sense of what your organization *can do*, versus what you *would like* it to do, you will need to assess the needs, strengths, and resources in your community. Because most community-based organizations will have limited resources to address all their needs, they must use resources wisely. When organization members work together to set priorities and allocate resources, they are far more likely to continue participating in the process and achieving measurable results.

Before you can set priorities, you must first determine what issues you want to improve. Chances are, you've already identified one or more environmental health and safety concerns in your community. Surveying community members, leaders, and your own organization staff also can help you identify the issues that your community would like to address.

Getting All the Facts

Whenever possible, gather and evaluate available information about the major environmental health and safety issues in your community. Data about some issues might not be immediately available for your county, city, or neighborhood, so your organization might have to collect the information for itself. When gathering information, keep these ideas in mind:

Tip: Mobilize the Right People

Many effective organizations are built around a core of committed individuals. Members must be willing to work, express themselves openly, and be willing to collaborate with others to inspire and sustain action. Members should also serve as catalysts to improve community organizations. Members are usually highly motivated when they work in areas that they know are directly affecting their lives.

- Talk to your neighbors, civic leaders, elected officials, and others to see which issues they feel are most pressing and whom they are most interested in helping.
- Call your appropriate local officials and ask for information about initiatives or activities that are already under way in your community.
- Search the business section of the phone book and call the outreach officers of relevant local agencies to help you get your ideas going.
- Get to know the people around you.
- Ask local business and government employees to participate.

Whatever its source, accurate information about what is happening in your community helps you understand the community's needs and create a reasonable target for improvement.

Prioritizing and Identifying Resources

Once you have compiled a list of issues and areas of concern, your organization must organize them in order of importance and potential for change. As part of this process, ask yourself the following questions:

- **Need:** Which issues pose the most immediate threat to health and environmental safety in your community?
- **Scope:** Which issues affect the largest populations in your community?
- **Potential for Effective Change:** Which issues would be most likely to improve in a reasonable timeframe with targeted funding and resources?
- **Funding:** Which issues can actually be addressed with the level of funding and resources your organization is likely to generate?

³ Condensed and modified from *Healthy People in Healthy Communities: A Community Planning Guide Using Healthy People 2010* <www.health.gov/healthypeople/Publications/HealthyCommunities2001/toc.htm>

Setting priorities should be a matter of consensus; all organization members should agree on which issues will be addressed immediately and which will be put off until a specified later date.

In addition, you need to develop a list of strengths and resources. The list can include available technology, communication resources, "infrastructure" (such as supermarkets, roads, bus lines, housing, and office space), funding, professional expertise, and data. Don't think of money as your only resource. Every community has a wealth of non-monetary resources that can be used to address areas of concern. Information is also a resource, and a strong partnership with state and local government agencies can help ensure that the data you need are available.

Building a Community Partnership

Successful community-based organizations know that grants are not the only outlet for raising funds and tapping into valuable resources. Strategic partnerships with other organizations and groups in your community can be another effective way to support, publicize, and implement your programs. Groups with a shared interest are often more powerful when they work together and hold one another accountable for results.

As a first step, make a comprehensive list of potential partners in your community or state. When assembling this list, think about the strengths and resources of each potential partner and how those characteristics could complement your organization's goals and needs. Determine and record how potential partners would benefit from collaborating with your organization. Your ability to research and persuasively communicate the advantages of an alliance—for both partners—will be critical to forming and maintaining a successful relationship.

The following types of organizations make good partners for community-based organizations:

Churches

Many local churches partner with community organizations to create awareness about environmental issues, form minority support groups, and raise funds for community betterment projects. For example, the Washington Association of Churches (WAC), an organization of 23 state churches, created several programs to support the needs of local groups, including environmental justice, economic justice, and racial justice. Global warming,

Some of the best fundraising potential exists in your own community. Often, your agencies are afraid to approach your own businesses and foundations. You feel awkward 'pestering' the folks in your own neighborhood. Yet, these are the very sources who are close to your target population, and most likely to put their faith in you.

—Stephen Fallon, Ph.D., CEO of Skills 4 Life, from *Closing the Gap*, Office of Minority Health, U.S. Department of Health and Human Services, April/May 2001

treaty fishing rights, the proliferation of hate groups and their impact on young people, and the disproportionate exposure to pesticides in minority communities are just a few of the important issues that these programs address.

For more information, visit WAC's Web site at <www.thewac.org/racialjustice.htm>. Contact your local churches to inquire about community partnerships and programs.

Other Nonprofit Groups

Consider partnering with other nonprofit groups to further your own organization's reach. Many nonprofits offer free services to community groups. For example, Alternatives for Community & Environment (ACE) based in Roxbury, Massachusetts, works in partnership with low-income and minority communities to achieve environmental justice. ACE provides legal and technical support, educational programs, and organizing assistance to New England community groups to solve environmental problems and develop local environmental leadership. ACE also created the Massachusetts Environmental Justice Network (MEJN), a network of more than 170 attorneys, public health professionals, and environmental consultants. According to ACE, the network acts as a clearinghouse, linking community groups addressing environmental and public health issues with free services from attorneys, environmental engineers, public health experts, and design consultants. Active cases range from toxic sewer overflows, excessive airline traffic, brownfields redevelopment, and polluting facilities.

For more information on ACE, visit <www.ace-ej.org>. Contact nonprofit organizations in your locale to see if they offer similar services. One resource to try is GuideStar, at <www.guidestar.org>, which offers a national database of nonprofit organizations. Another online nonprofit directory is operated by Action Without Borders at <www.idealyst.org>.

State Government Departments

State departments are good resources for organizations seeking educational information about environmental and occupational health and safety issues. Many state Web sites provide links to their health and environmental departments, which might include:

- Department of Environmental Protection
 - Waste Site Cleanup
 - Pollution Prevention Programs
 - Air quality
 - Brownfields
 - Environmental justice
 - Solid waste/recycling
 - Toxic use reduction
- Executive Office of Environmental Affairs
- Department of Environmental Management
- Department of Food and Agriculture
- Division of Occupational Safety
 - Asbestos Program
 - Lead Program
 - Occupational Safety and Health Statistics Program
 - Mine Safety and Health Program
 - Indoor Air Quality Program
- Executive Office of Health and Human Services
- Department of Public Health
 - Childhood Lead Poisoning Prevention Program
 - Environmental Health Education Unit
 - Division of Maternal, Child, and Family Health
 - Division for Special Health Needs
 - Division of Community Health Promotion
 - Minority Health Advisory Board

For more information, visit your state's Web site or check a local phone book to find contact information for each state department. These departments might offer educational outreach materials, training sessions, information on public involvement in community projects, and other relevant information.

Federal Government

The U.S. Environmental Protection Agency's (EPA's) Web site features a Concerned Citizens section at <www.epa.gov/epahome/acting.htm>, which contains a wealth of resources for helping people make a difference in their communities. Topics on this site include protecting your air, protecting your water, dealing with waste, community-based environmental protection efforts, and tips and tools.

Tip: Beware of Partnership Pitfalls

Inadequate commitment or unrealistic expectations on the part of one or more of the partners can weaken or destroy a partnership. The same is true of organizations that realize too late that they lack the capacity to follow through.

Other Organizations

Community partnerships can also be investigated/formed with the following:

- Health care facilities
- Unions
- Insurance companies
- Chamber of commerce
- Universities
- Small business development/assistance centers
- Private companies
- Trade associations
- Economic development agencies

For more information, search the Internet and your local phone book to locate these types of organizations in your community.

Tips for Maintaining a Successful Partnership

Once a partnership is formed, it takes a considerable amount of time and effort to manage and maintain the relationship. Below are a few tips and lessons learned from community partnerships.

- Create a detailed partnership agreement and action plan, working with your partner organization to outline objectives, activities, partner roles, respective contributions, decision-making processes, and assessment of results.
- Make sure you and your partners learn about each other's expectations and limitations.
- Set a time line and meeting schedule to maintain clear objectives and good communication.
- Document how the partnership is mutually beneficial for each partner and discuss how you can ensure appropriate credit and recognition for partnership results.

Grant Preparation

Securing funding is one of the most crucial and constant challenges your organization will face. Many people

are overwhelmed by the task of developing and writing a successful grant proposal. But with straightforward planning, organization, and thoroughness, your agency can present a compelling proposal that wins financial support for your goals.

Before your organization is ready to seek funding from outside sources, three elements (which are explained in previous chapters) must already be in place:

- 1.** Your agency should have a written mission statement.
- 2.** Your organization should have completed the process of officially acquiring nonprofit status, or you need to have identified an appropriate fiscal agent to receive the funds on your behalf.
- 3.** You should have credible program, achievements, or plans in support of your mission.

Once these details are secured, you are ready to prepare your master proposal—a comprehensive and persuasive account of your project. By assembling the master proposal before you approach funders, you work out all of the details in advance. In addition, you will usually be able to use this master proposal for multiple grant applications.

Some nonprofits believe that their groups must look special or be doing something unique before they are in a position to approach foundations and corporate grantmakers for financial support. This assumption is incorrect. If your organization is meeting a valid need, you are more than likely ready to seek foundation or corporate support.

Gathering Background Information

The first step in writing the master proposal is to gather appropriate documentation. This data-gathering process makes the actual writing much easier. And by involving other stakeholders in the process, it also helps key people within your agency seriously consider the project's value to the organization. You will require background information in three areas:

1. Concept

You need to have a good sense of how the project fits into the philosophy and mission of your agency. The need that your proposal is addressing must also be documented and well articulated. Funders want to know that a project reinforces the overall direction of an organization, and they may need to be convinced

Tip: Enlist the Right Help

Determine who will help you gather the background information you need. In a small nonprofit, a knowledgeable board member might be the logical choice. A larger agency, however, may have program and financial support staff who can help.

that the case for the project is compelling. Collect thorough background data on your organization and on the need your project is designed to address.

2. Program

Here is a checklist of the program information you will need:

- The nature of the project and how it will be conducted.
- The timetable for the project.
- The anticipated outcomes and how best to evaluate the results.
- Staffing and volunteer needs, including deployment of existing staff and new hires.

3. Expenses

Because you will not be able to pin down all the expenses associated with the project until the details and timing have been worked out, the main financial data gathering takes place after the narrative part of the master proposal has been written. At this stage, however, you do need to sketch out the broad outlines of the budget to ensure costs are reasonable compared to the outcomes you anticipate.

Tip: Predict the Right Price

As you sketch out the potential budget for your project, remember to be realistic. If it appears that the costs will be prohibitive, even with a foundation grant, then you need to scale back or adjust the scope of your plans.

Writing the Proposal

Once you've collected the appropriate background information, it's time to assemble that information in a winning presentation. Figure 1 provides an outline of a successful proposal's main components. Following are brief descriptions of what you should consider and include in writing these various sections.

Figure 1: Components of a Proposal

Executive Summary: Overall statement of your case and summary of proposal (1 page).

Statement of Need: Why this project is necessary (2 pages).

Project Description: Nuts and bolts of how the project will be implemented and evaluated (3 pages).

Budget: Financial description of the project plus explanatory notes (1 page).

Organization Information: History and structure of nonprofit, activities, audiences, and services (1 page).

Conclusion: Summary of the proposal's main points (2 paragraphs).

Executive Summary

This is one of the most important sections of the entire document, providing readers with a snapshot of what is to follow. By summarizing the key information, the executive summary acts as a sales pitch to convince readers that this project deserves support. Be certain to include the following elements:

- **Problem:** A brief statement of the problem or need your agency is prepared to address (1-2 paragraphs).
- **Solution:** A short description of the project, including what will take place and how many people will benefit, how and where it will operate, for how long, and who will staff it (1-2 paragraphs).
- **Funding requirements:** An explanation of the amount of grant money required for the project and your plans for future funding (1 paragraph).
- **Organization and its expertise:** A brief statement of the name, history, purpose, and activities of your agency, emphasizing its capacity to carry out this proposal (1 paragraph).

The Statement of Need

Building on initial interest, the statement of need enables the reader to learn more about the issues your project will address. It presents the facts and evidence

supporting the need for the project and establishes that your nonprofit understands these problems and is prepared to address them. The information supporting the case can come from authorities in the field, as well as from your agency's own experience.

Remember, the statement of need does not have to be long and involved. Short, concise information captures the reader's attention. As you develop this section, keep the following ideas in mind.

- **Decide which facts or statistics best support the project.** Be sure the data you present are accurate. Avoid information that is too generic, broad, or out of date.
- **Give the reader hope.** The picture you paint should not be so grim that the solution appears hopeless. The funder will wonder whether an investment in a solution will be worthwhile. Avoid overstatement and overly emotional appeals.
- **Decide if you want to put your project forward as a model.** This could expand the base fun-

Tip: Argue Your Case

You want the "Need" section to be succinct, yet persuasive. Like a good debater, you must assemble all the arguments in a logical sequence that will readily convince the reader of their importance.

ders, but it works only for certain types of projects. Document how problems addressed by your project occur in other communities and explain how your solution could be used elsewhere.

- ✿ **Determine whether it is reasonable to portray the need as acute.** You are asking the funder to pay more attention because either the problem you address is worse than others or the solution you propose makes more sense than others.
- ✿ **Decide whether you can demonstrate that your program addresses the need differently or better than other projects that preceded it.** Describe how your work complements, but does not duplicate, the work of others. Avoid being critical of the competition. If possible, make it clear that you are aware of and on good terms with others doing work in your field.
- ✿ **Avoid circular reasoning.** In circular reasoning, you present the absence of your solution as the actual problem. Then your solution is offered as the way to solve the problem. For example: "The problem is that we have no pool in our community. Building a pool will solve the problem."

The Project Description

This section of your proposal should have five subsections, described below. Taken together, the five subsections present an interlocking picture of the total project.

Objectives

Objectives are the measurable outcomes of the program, and they define your methods. Your objectives must be tangible, specific, concrete, measurable, and achievable in a specified time period. Be realistic in setting objectives—in the final report, the funder will want to see the project actually accomplished its objectives.

Do not confuse objectives with goals, which are conceptual and more abstract. For example:

- ✿ **Goal:** Our after-school program will help children read better.
- ✿ **Objective:** Our after-school remedial education program will assist 50 children in improving their reading scores by one grade level as demonstrated on standardized reading tests administered after participating in the program for six months.

Tip: Presentation Matters

Your proposal will set forth one or more objectives. Present these objectives clearly on the page, using numbers, bullets, or indentations. With increasing competition for dollars, well-articulated objectives are critical to a proposal's success.

Methods

The methods section describes the specific activities that will take place to achieve the objectives. It enables the readers to visualize the implementation of the project and convinces them that your agency knows what it is doing. In describing your methods, you must answer the basics:

- ✿ **How:** A detailed description of what will occur from the time the project begins until completion. Your methods should match the previously stated objectives.
- ✿ **When:** Presents the order and timing for the tasks. Provide a step-by-step timetable that tells the reader "when" and provides another project summary supporting the rest of the methods section.
- ✿ **Why:** Defend your chosen methods, especially if they are new or unorthodox. Why will the planned work lead to the outcomes you anticipate? Use expert testimony and examples of other projects that work.

Staffing/Administration

Devote a few sentences to discussing the number of staff, their qualifications, and specific assignments. Describe your plans for administering the project. Make it clear who is responsible for financial management, project outcomes, and reporting.

For a project with paid staff, describe whether staff will work full-time or part-time, and whether they are currently employed or will be hired. Salary and project costs are affected by staff qualifications. Delineate experience and education levels required for key staff. If a program director has been chosen, summarize his or her credentials and include a brief biographical sketch in an appendix. A strong project director can help influence a grant decision.

Tip: What If My Staff Are All Volunteers?

Most proposal writers do not develop staffing sections for projects that are primarily volunteer run. Describing tasks that volunteers will undertake, however, can be most helpful to the proposal reader. Such information underscores the value added by the volunteers as well as the cost-effectiveness of the project.

Evaluation

An evaluation plan should be built into your project, indicating to readers that you take your objectives seriously. Evaluation is also a sound management tool, helping a nonprofit refine and improve its program. In addition, an evaluation helps others learn from your experience.

There are two types of formal evaluation: one measures product and the other analyzes process. Either or both might be appropriate, depending on your objectives. For either type, you must describe how evaluation information will be collected and how data will be analyzed. In addition, explain how and to what audience the evaluation results will be reported.

Sustainability

Today's grantseekers are expected to demonstrate the long-term financial viability of the project and of the nonprofit organization itself. You need to be very specific about current and projected funding streams, both earned income and raised funds, and about the base of financial support for your nonprofit.

Tip: Know Your Numbers

In documenting your funding situation, it is important to have backup figures ready, in case a prospective funder asks for these, even though you are unlikely to include this information in the actual grant proposal.

Tip: The Beauty of Worksheets

Worksheets can be useful as you develop the proposal and discuss it with funders; they are also a valuable tool for monitoring the project once it is under way and for reporting after completion. (See Figure 2.)

Funders want you to prove either that your project is finite (with start-up and ending dates); or that it is capacity-building (it will contribute to the future self-sufficiency of your agency and/or enable it to expand services that might be revenue generating); or that it will make your organization attractive to other funders in the future.

The Budget

The budget for your proposal may be as simple as a one-page statement of projected expenses, or your proposal may require a more complex presentation. For example, it could include a page on projected support and revenue and notes explaining items of expense or of revenue.

Expense Budget

As you assemble the budget, go back through the proposal narrative and make a list of all personnel and non-personnel items related to project operation. Include new costs that will be incurred if the project is funded and ongoing expenses for items that will be allocated to the project. Put the costs you have identified next to each item on your list. Use worksheets to summarize these items and the calculations used to arrive at dollar figures (see Figure 2).

Figure 2:

Part of a worksheet for a year-long project might look like this:

Item	Description	Cost
Executive director	Supervision	10% of salary=\$10,000 25% benefits=\$2,500
Project director	Hired in month one	11 months at \$35,000=\$32,083 25% benefits=\$8,025
Office space	Requires 25% of current space	25% x \$20,000=\$5,000
Overhead	20% of project cost	20% x \$64,628=\$12,926

Using your worksheets, prepare the expense budget. For most projects, costs should be grouped into subcategories reflecting critical areas of expense. You might organize by personnel and nonpersonnel costs. Personnel subcategories could include salaries, benefits, and consultants. Nonpersonnel subcategories could include travel, equipment, and printing. Attach a dollar figure to each line.

Support and Revenue Statement

For the typical project, no support and revenue statement is necessary. But if grant support has already been awarded to the project, or if you expect project activities to generate income, a support and revenue statement is the place to provide this information.

Budget Narrative

A narrative portion of the budget is used to explain any unusual line items in the budget and is not always needed. If costs are straightforward and the numbers tell the story clearly, explanations are redundant.

If you decide a budget narrative is needed, create "Notes to the Budget," with footnote-style numbers on the line items in the budget keyed to numbered explanations. Or, if an extensive explanation is required, structure the budget narrative as straight text. Remember, the basic narrative about the project and your organization does not belong in the budget narrative.

Organizational Information

Typically, a resumé of your nonprofit organization should come at the end of your proposal. It is usually better to sell the need for your project and then your agency's ability to carry it out. This information can be conveyed easily by attaching a brochure or other prepared statement. In two pages or less, tell the reader when your nonprofit came into existence; state its mission, being certain to demonstrate how the subject of the proposal fits within or extends that mission; and describe the organization's structure, programs, and special expertise.

Discuss the size of the board, how board members are recruited, and their level of participation. (You should include the full board list in an appendix.) Provide details on the staff, including the numbers of full- and part-time staff and their levels of expertise.

Conclusion

Every proposal should have a concluding paragraph or two. This is a good place to call attention to the future,

Tip: Tone It Down

For a short proposal, keep in mind that you are writing a letter to someone. It should not be as formal in style as a longer proposal would be. But don't assume that because it is only a letter, it isn't a time-consuming and challenging task. Every document you put in front of a funder says something about your agency.

after the grant is completed. If appropriate, outline some of the follow-up activities that might be undertaken to begin to prepare your funders for your next request. Alternatively, you should state how the project might carry on without further grant support.

This section is also the place to make a final appeal for your project. Briefly reiterate what your nonprofit wants to do and why it is important. Underscore why your agency needs funding to accomplish it. Don't be afraid at this stage to use a bit of emotion to solidify your case.

Letter Proposal

Sometimes the scale of the project might suggest a small-scale letter format proposal, or the type of request might not require all of the proposal components recommended here. Remember, the letter should be no more than three pages. Here are key components of a good letter proposal:

- **Ask for the gift:** Begin with a reference to prior contact with the funder, if any. State why you are writing and how much funding is required.
- **Describe the need:** Briefly tell the funder why there is a need for this project, piece of equipment, etc.
- **Explain what you will do:** Provide enough detail to pique the funder's interest. Describe precisely what will take place as a result of the grant.
- **Provide agency data:** Include your mission statement, a brief description of programs offered, number of people served, and staff.
- **Include appropriate budget data:** The budget might be a half page long. Decide if this information should be incorporated into the letter or in a separate attachment. Be sure to indicate the total cost of the project.
- **Close:** As with the longer proposal, a letter proposal needs a strong concluding statement.

 **Attach any additional information required:**

The funder will need: a board list, a copy of your IRS determination letter, financial documentation, and brief resumés of key staff.

What Happens Next?

Submitting your proposal is not the end of your involvement in the grantmaking process. Grant review procedures vary widely, and the decision-making process can take anywhere from a few weeks to six months or more. During the review process, the funder may ask for additional information either directly from you or from outside consultants or professional references. You need to be patient but persistent. If you are unclear about the process, don't hesitate to ask.

If your hard work results in a grant, acknowledge the funder's support with a letter of thanks. You also need to find out whether the funder has specific forms, procedures, and deadlines for reporting the progress of your project. Clarifying your responsibilities as a grantee at the outset, particularly with respect to financial reporting, will prevent misunderstandings and more serious problems later.

Progress and Measurement⁵

After your organization has won a grant or formed a partnership, the real work begins. Monitoring and measuring your progress toward specific project goals is critical to long-term success.

For most grantees, post-award administration consists of a number of different activities carried out by grants management staff, program staff, auditors, and others. Depending on the type of grant or program, performance monitoring can include specific assessments of grant-related performance and financial aspects, as well as the entire organization's performance.

Tip: Why Evaluate?

Conducting an evaluation of your program can:

1. Facilitate your thinking about what the program is all about, including its goals, how it meets goals, and how you will know if goals have been met.
2. Produce data or verify results that can be used for public relations and promoting services in the community.
3. Produce valid comparisons between other programs in your community to help grantmakers or sponsors decide which program to fund.
4. Fully examine and describe effective programs for duplication elsewhere.

Establishing Measurement Criteria

In many cases, the funder develops a specific set of criteria to measure the progress of your grant performance. Grant management staff and program staff should always set formal guidelines concerning grantee performance and progress. The monitoring approach should be consistent with the type of program, whether the award is a grant or cooperative agreement, and other relevant factors. Remember, it is important not only to understand your funder's expectations for the progress of the grant, but also to set your own internal benchmarks and checkpoints to assess results. Measurement criteria will vary depending on your program or grant, but some potential areas for evaluation could include:

-  **Quality:** How long has your group been together? What type of structure has been developed to ensure the continuity of your group, such as officers, membership guidelines, and memoranda of understanding? How active are the group's members? How often do they meet? How much volunteer and professional time is being focused on a particular problem because of your group?
-  **Comprehensiveness:** What types of individuals are representing your organization? Are they the right type of individuals to accomplish the work of the

⁴Based on *The Foundation Center's Guide to Proposal Writing*, 3rd ed. (New York: The Foundation Center, 2001), by Jane C. Geever, chairman of the development consulting firm, J. C. Geever, Inc. *The Foundation Center's Guide to Proposal Writing* and other resources are available for free use in Foundation Center libraries and Cooperating Collections, or can be ordered through The Foundation Center's Web site (<http://fdncenter.org/>).

⁵ Portions of this section excerpted from or based on the following:
Closing the Gap, a newsletter of the Office of Minority Health, U.S. Department of Health and Human Services, April/May 2001, page 7. How to Evaluate Your Program.

Evaluating the Collaboration Process, Richard W. Clark, Ohio State University fact sheet, <<http://ohioline.osu.edu/bc-fact/0007.html>>.

The Foundation Center's Guide to Proposal Writing, 3rd ed. (New York: The Foundation Center, 2001), by Jane C. Geever, chairman of the development consulting firm J. C. Geever, Inc.

U.S. Department of Health and Human Services: GrantsNet <www.hhs.gov/grantsnet/adminis/gpd/gpd306.htm>.

grant? What types of databases or directories have been created to facilitate information sharing and assistance related to this grant?

- **Access and Equity:** Do all members of your grant's target audience in the community have equal access to program efforts? Has access to services been enhanced by program efforts? How does the target audience obtain access to your program's information and services?
- **Information and Advocacy:** How has information increased to your target audience? To what extent is your organization promoting its efforts and services? How is your group serving as an advocate to its target audience?
- **Cost-Effectiveness:** Have existing funds been used effectively? How? Have the funds used attained the expected results?
- **Additional General Questions:** What are you doing that is really working well? What are the major problems you are facing? Are there unanticipated outcomes from the project?

You can use many methodologies to explore the questions in the proposed areas of evaluation, including:

- Surveys/questionnaires
- Interviews
- Structured observation
- Review of records and reports
- Focus group interviews
- Interaction analysis

The following Internet resources provide information on program evaluation and measurement:

- The American Evaluation Association:
<www.eval.org>

- Basic Guide to Program Evaluation, Carter McNamara, Ph.D., 1998 <www.mapnp.org/library/evaluatn/fnl_eval.htm#anchor184773>.

Tip: Always Provide a Report

Even if you have received unrestricted, general-purpose support, funders want to know what overall goals you set for your agency for the year. Did you achieve them? What were some specific triumphs? What were some particular problems you faced, and how did you overcome them? Or, are you still dealing with the challenges?

Communicating With Your Funder

Throughout grant implementation, maintaining consistent communication with your funder is crucial. In many cases, this involves a continuing dialogue between your project officer/program official and the grant management officer or specialist. This dialogue should allow you to assess whether:

- Your progress is consistent with available funding. In other words, is current funding adequate, or is some supplement needed? Are any unobligated balances being accumulated?
- Changes are anticipated that will require action by the awarding office.
- There are actual or potential institutional compliance issues that may have an impact on the project(s) being funded.

Grant Reporting

Besides communication, your funder might also require formalized progress reports. Usually, specific reporting requirements are included in the grant letter; sometimes you are asked to sign and return a copy of the grant letter or a separate grant contract. In some cases, the funder will request timely reports from your organization and tie their receipt to grant payments.

When a foundation provides formal reporting guidelines, there usually will be dates when the reports are due. If they have given you specific dates for reporting, develop a system to keep track of them. Some funders want reports at quarterly or six-month intervals, but most request an annual report and/or a final report two to three months after the conclusion of the project. Even for grants of fairly short duration, foundations often express the desire to receive an interim report. Unless otherwise stated, an interim report can be informal.

III. Grants in Action

Following are just a few examples of Hispanic community-based organizations that have successfully secured grants to enhance their environmental and occupational health and safety work. For more information, visit each of the Web sites included below.

Grantee: Coalition including Esperanza Health Center, Nueva Esperanza, and the School District of Philadelphia

Grant Title: Healthy Living 2000

Grant Giver: The Office of Minority Health (OMH) of the U.S. Department of Health and Human Services

Program: The Minority Health Coalition Demonstration Grant Program

Program Background: The Minority Community Health Coalition Demonstration Program was founded in 1986 to promote the development of coalitions to plan and coordinate services to reduce sociocultural and linguistic barriers to health care. The coalition approach is believed to be an effective strategy for health promotion and risk reduction among targeted minority populations. Grants are administered by minority community-based organizations that have established coalitions with at least two other organizations/institutions, one of which is a health care facility. Grantees are given flexibility to define and address health problems unique to their communities.

Funding: Three-year period (7/98-7/01)

Target Population: Hispanic/Latino

Grant Description: The Healthy Living 2000 project's overall goal is to educate and empower 100 asthmatic children, their families, and others to reduce or eliminate risk factors relating to asthma and lead poisoning. The Coalition members consist of Esperanza Health Center, Nueva Esperanza, and the School District of Philadelphia. The Coalition seeks a holistic approach to improve the health status of Latino children, their families, and friends through environmental risk-reduction education and links with community health centers, housing associations, and other networking agencies. The project activities focus on interactive educational workshops, developing relationships with participants, providing intervention services, and establishing linkages with community agencies and

churches for ongoing treatment and support. Educational "Healthy Living" workshops are conducted for the target group, their families, and school personnel. Attendees of the workshops are trained to recognize, control, and eliminate environmental health hazards that trigger or exacerbate asthma episodes or put them at risk for lead poisoning. The community housing representatives provide free in-home lead paint assessments to those enrolled in the program.

For More Information: Visit www.omhrc.gov/omhfs1.pdf.

Grant Title: Renewal Grant

Grantee: Silicon Valley Toxics Coalition (SVTC), San Jose, California

Grant Giver: Common Counsel Foundation

Program: FY 2000 Acorn Foundation Grants

Program Background: Established in 1978, the Acorn Foundation supports projects dedicated to building a sustainable future for the planet and restoring a healthy global environment. The Acorn Foundation is particularly interested in small and innovative community-based projects that:

- Preserve and restore habitats supporting biological diversity and wildlife.
- Advocate environmental justice, particularly in low-income and indigenous communities.
- Prevent or remedy toxic pollution.

Grantee Background: SVTC calls attention to and improves the environmental health and safety practices of the global electronics industry. Since 1982, SVTC has worked with hundreds of communities and companies locally and around the world to raise the environmental consciousness and performance of the high-tech sector.

Community Background: Minority groups, mostly Latino and Asian/Pacific Islander, make up 45 percent of the general population and 56 percent of children younger than age 15. Lower income people of color work in the most hazardous jobs and live in the most polluted neighborhoods in Silicon Valley. Ethnic minorities and low-income groups suffer poor health compared to the more affluent, white population in Silicon Valley, losing more years of life because of illnesses such as heart disease, cancer, and strokes. Minorities, especially women, also face greater health and safety risks from industrial pollution both on the job and in the community. A majority of workers in high-tech semi-skilled production jobs, which often involve hazardous chemical handling and exposures, are minority women. Latinas and Asian/Pacific Islanders also live in neighborhoods nearest to sites of toxic leaks and spills from industry, resulting in "double exposure" to chemicals, in many cases.

Funding: \$6,000

Grant Description: This was a renewal grant to organize community, labor, and environmental groups around safety and health issues brought on by the expansion of the computer and electronic industries and its pollution of air, water, and land.

For More Information: Visit <www.commoncounsel.org/pages/foundation.html#acorn> or <www.svtc.org/about/programs.htm>.

Grantee: Center for Hispanic Policy and Advocacy, Providence, Rhode Island

Grant Title: The Rhode Island Environmental Justice Network

Grant Giver: U.S. Environmental Protection Agency (Region 1)

Program: Urban Environmental Initiative (1997)

Program Background: The Urban Environmental Initiative (UEI) is a pilot program launched in 1995 under EPA New England, to address environmental and public health problems in urban cities. The UEI facilitates community-based environmental protection in Boston, Massachusetts; Hartford, Connecticut; and Providence, Rhode Island.

The UEI program takes an active role in listening to community needs and concerns, identifying projects, and providing resources to implement projects that make measurable improvements in public health and the quality of the urban environment.

Grant Description: The Rhode Island Environmental Justice Network is a coalition of numerous local grassroots organizations including: the Center for Hispanic Policy and Advocacy, Direct Action for Rights and Equality (DARE), The Urban League of Rhode Island, the Hmong United Association of Rhode Island, and the All South Providence Union (ASPU). The Network focuses on environmental issues, especially vacant lots, which affect low-income people of color in Rhode Island's urban areas. Major goals of the Network include enhancing community capacity to identify and solve local environmental problems and to better understand and use available public health and environmental data.

The Network hosts regular coordination and planning meetings involving community groups, sponsors educational workshops, and trains community residents to map neighborhood environmental risks. Each organization involved with the Network brings its own innovative, community-based approach to environmental and health issues. The Environmental Justice Network is a great example of local, grassroots organizations uniting together to more effectively and accurately identify and address environmental issues in their neighborhoods.

For More Information: Visit <www.epa.gov/region01/eco/uei/provid/pgrants97.html> or <www.epa.gov/region01/eco/uei/index.html>.

Grantee: Clean Water Fund

Grant Giver: U.S. Environmental Protection Agency, Office of Environmental Justice

Program: Small Grants Program

Program Background: The Small Grants Program was established by the EPA's Office of Environmental Justice (OEJ) in 1994. The program assists community-based organizations that are working on solutions to local environmental problems.

Funding: \$10,000

Grant Description: Funding was used to help farm workers gain access to workplace safety information and training by bridging the language barriers between farm workers and their employers.

The program aimed to improve communication between farm workers and employers and to address the migrant farm worker community's high rates of pesticide exposure. "Train the Trainer" workshops were held to educate 10 Hispanic community leaders about pesticides and workplace safety. Intensive, one-on-one training was provided to the leaders, who planned to use this information to educate 500 migrant workers.

A daylong community forum was held with more than 80 farm workers, and a Hispanic Food Festival brought together 400 Hispanic residents who learned about pesticide safety and household hazards. Educational outreach was conducted in eight North Dakota communities, and a bilingual intern was hired to speak with nearly 1,500 farm workers about their issues.

For More Information: Visit <<http://es.epa.gov/oeca/oej/success.pdf>>.

Grantee: Michigan Migrant Legal Assistance Program (MMLAP)

Grant Giver: U.S. Environmental Protection Agency, Office of Environmental Justice

Program: Small Grants Program

Program Background: The Small Grants Program was established by OEJ in 1994. The program assists community-based organizations that are working on solutions to local environmental problems.

Funding: \$20,000

Grant Description: The purpose of this program was to increase the safety of farm workers and their families in 30 counties in Western Michigan by providing information on environmental and public health issues. Topics included environmental laws, pesticide labeling, ground water contamination, and safety conditions.

An educational packet was produced and distributed to farm workers, and bilingual camp meetings and farm worker information meetings related to health and safety were conducted, reaching 1,500 farm workers. Training on the worker protection standards and pesticide safety was also provided.

A concert for farm worker environmental justice was held and attended by approximately 1,800 people. A mailing list was compiled at the concert, increasing the size of the target audience.

For More Information: Visit <<http://es.epa.gov/oeca/oej/success.pdf>>.

IV. Glossary

Environmental and Occupational Health and Safety Terms

Following are definitions of terms related to environmental and occupational health and safety. They were taken and abridged from the following sources:

- ✿ National Safety Council's Environmental Glossary. <www.nsc.org/ehc/glossary.htm>.
- ✿ Alaska Community Action on Toxics Definitions: <www.akaction.net/pages/glossary.html>.
- ✿ Connecticut Department of Public Health Glossary. <www.state.ct.us/dph/OPPE/sha99/glossary.htm>.

Acid rain: Precipitation that has been made acidic by airborne pollutants.

Air emissions: Gas emitted into the air from industrial and chemical processes, such as ozone, carbon monoxide, nitrogen oxide, nitrogen dioxide, sulfur dioxide, and others.

Air pollutant: Any substance in air that could, in high enough concentration, harm humans, other animals, vegetation, or material. Pollutants can include almost any natural or artificial composition of airborne matter. They might be solid particles, liquid droplets, gases, or a combination of these elements.

Asbestos: A mineral fiber that can pollute air or water and cause cancer or asbestos when inhaled. EPA has banned or severely restricted the use of asbestos in manufacturing and construction.

Benchmark: A term meaning a measurement taken at the outset of a series of measurements of the same variable, sometimes meaning the best or most desirable value of the variable.

Burden of disease: A general term used in public health and epidemiological literature to identify the cumulative effect of a broad range of harmful disease consequences on a community, including the health, social, and economic costs to the individual and to society.

Byproduct: Materials other than the intended product generated by an industrial process.

Carcinogenic or carcinogen: Capable of causing cancer. A suspected carcinogen is a substance that might cause cancer in humans or animals, but for which the evidence is not conclusive.

Chronic disease: A disease with one or more of the following characteristics: permanence; leaves residual disability; caused by non-reversible pathological alteration; requires special training of the patient for rehabilitation; or may require a long period of supervision, observation, or care.

Climate change: This term is commonly used interchangeably with "global warming" and "the greenhouse effect." Climate change refers to the buildup of man-made gases in the atmosphere that trap the sun's heat, causing changes in weather patterns on a global scale. The effects include changes in rainfall patterns, sea level rise, potential droughts, habitat loss, and heat stress. The greenhouse gases of most concern are carbon dioxide, methane, and nitrous oxides. If these gases in our atmosphere double, the Earth could warm 1.5 to 4.5 degrees by the year 2050, with changes in global precipitation having the greatest consequences.

Disability: Any temporary or long-term condition (physical and/or mental) that results from an acute or chronic condition that might prevent the performance of regular duties.

Environment: The sum of all external conditions affecting the life, development, and survival of an organism.

Environmental health: Characteristics of health that result from the aggregate impact of both natural and man-made surroundings, including: health effects of air pollution, water pollution, noise pollution, solid waste disposal, and housing; occupational disease and injuries; and those diseases related to unsanitary surroundings.

Environmental justice: The fair treatment of people of all races, cultures, incomes, and educational levels with respect to the development and enforcement of environ-

mental laws, regulations, and policies. Fair treatment implies that no population should be forced to shoulder a disproportionate share of exposure to the negative effects of pollution due to lack of political or economic strength.

Epidemiology: The study of the occurrence and causes of health effects in human populations. An epidemiological study often compares two groups of people who are alike except for one factor, such as exposure to a chemical or the presence of a health effect. The investigators try to determine if any factor is associated with the health effect.

Exposure: Reference to pollutants that come into contact with the body and present a potential health threat. The most common routes of exposure are through the skin, mouth, or by inhalation.

Hazardous air pollutants: Air pollutants that are not covered by ambient air quality standards but which, as defined in the Clean Air Act, may reasonably be expected to cause or contribute to irreversible illness or death. Such pollutants include asbestos, beryllium, mercury, benzene, coke oven emissions, radionuclides, and vinyl chloride.

Hazardous chemical: An EPA designation for any hazardous material capable of producing fires and explosions or adverse health effects like cancer and dermatitis. Hazardous chemicals are distinct from hazardous waste.

Hazardous substance: 1) Any material that poses a threat to human health and/or the environment. Typical hazardous substances are toxic, corrosive, ignitable, explosive, or chemically reactive. 2) Any substance designated by EPA to be reported if a designated quantity of the substance is spilled in the waters of the United States or if otherwise released into the environment.

Hazardous waste: A subset of solid waste that poses substantial or potential threats to public health or the environment and meets any of the following criteria:

- Specifically listed as a hazardous waste by EPA.
- Exhibits one or more of the characteristics of hazardous waste (ignitability, corrosiveness, reactivity, and/or toxicity).
- Generated by the treatment of hazardous waste, or is contained in hazardous waste.

Health: A state of physical, mental, and social well-being and productive functioning—not merely the absence of disease or infirmity.

Health plan: A health maintenance organization, preferred provider organization, insured plan, self-funded plan, or other entity that covers health care services.

Hispanic ethnicity: Refers to people whose origins are from Spain, the Spanish-speaking countries of Central America, South America, and the Caribbean, or persons of Hispanic origin identifying themselves as Spanish, Spanish-American, Hispanic, Hispano, Latino, etc.

Incidence: The number of new cases of a specific disease occurring during a certain period of time.

Indicator: A measurable factor that reflects or is highly correlated with either a health problem or outcome (e.g., infant mortality or disability days) or particular characteristics of health systems service delivery (e.g., cost per patient day, percent of area residents with a regular control course of care, or time or distance from primary care). A proxy indicator can be used to determine social or environmental conditions, values, interests, and concerns.

Medicaid: A federally aided, state-operated and administered program that provides medical benefits for certain indigent or low-income persons in need of health and medical care. The program, authorized by Title XIX of the Social Security Act, is basically for poor persons who meet specified eligibility criteria. Subject to broad federal guidelines, states determine the benefits covered, program eligibility, rates of payment for providers, and methods of administering the program.

Mental health: The capacity of an individual to form harmonious relations with his/her social and physical environment and to achieve a balanced satisfaction of his/her own drives.

Mortality rate: Also known as “death rate,” expresses the number of deaths in a unit of population within a prescribed time. May be expressed as crude death rates (e.g., total deaths in relation to total population during a year) or as rates specified for disease and, sometimes, for age, sex, or other attributes (e.g., number of deaths from cancer in white males in relation to the white male population during a year).

Pollution: Any substances in water, soil, or air that degrade the natural quality of the environment; offend the sense of sight, taste, or smell; or cause a health hazard. The usefulness of natural resources is usually impaired by the presence of pollution.

Preventive care: Comprehensive care emphasizing patients' behaviors that encourage health promotion and disease prevention, early detection, and early treatment of conditions, generally including routine physical examinations, immunization, and well-person care.

OSHA: Occupational Safety and Health Administration of the United States, which covers worker health and safety regulations and programs.

Race: A population of individuals who identify themselves from a common history, nationality, or geographical place. When responses in the "race" line item on vital records are associated with the definition of Hispanic origin, they are re-coded to "white race," as described in the National Center for Health Statistics instruction manuals for coding vital records. Individuals identifying themselves as either "white," "black," or "other" race can be of any ethnic group.

Solid waste: As defined under the Resource Conservation and Recovery Act (RCRA), any solid, semi-solid, liquid, or contained gaseous materials discarded from industrial, commercial, mining, or agricultural operations, and from community activities. Solid waste includes: garbage, construction debris, or commercial refuse; sludge from water supply or waste treatment plants or air pollution control facilities; and other discarded materials.

Toxic substance: A chemical or mixture that can cause illness, death, disease, or birth defects. The quantities and exposures necessary to cause these effects can vary widely. Many toxic substances are pollutants and contaminants in the environment.

Underground Storage Tank (UST): A tank and any underground piping connected to the tank that has 10 percent or more of its volume (including pipe volume) beneath the surface of the ground. USTs are designed to hold gasoline, other petroleum products, and hazardous materials.

Uninsured: People who lack public or private health insurance.

Grant-Seeking Terms

Following are definitions related to grant proposals and awards, taken and abridged from *The Foundation Center's User-Friendly Guide to Funding Research & Resources Glossary*: <http://fdncenter.org/learn/ufg/ufg_gloss1.html>.

Annual report: A voluntary report issued by a foundation or corporation that provides financial data and descriptions of its grantmaking activities. Annual reports vary in format from simple documents listing the year's grants to detailed publications that provide substantial information about the grantmaker's programs.

Assets: The amount of capital or principal—money, stocks, bonds, real estate, or other resources—controlled by a foundation or corporate giving program. Generally, assets are invested and the resulting income is used to make grants.

Associates program: A fee-based membership program of the Foundation Center providing toll-free telephone reference, photocopy and fax service, and computer searches of Foundation Center databases.

Beneficiary: In philanthropic terms, the donee or grantee receiving funds from a foundation or corporate giving program is the beneficiary, although society benefits as well.

Capital support: Funds provided for endowment purposes, buildings, construction, or equipment.

Challenge grant: A grant that is paid only if the donee organization is able to raise additional funds from other sources. Challenge grants are often used to stimulate giving from other donors. *See also matching grant.*

Community foundation: A 501(c)(3) organization that makes grants for charitable purposes in a specific community or region. The funds available to a community foundation are usually derived from many donors and held in an endowment that is independently administered; income earned by the endowment is then used to make grants. Although a community foundation may be classified by the Internal Revenue Service as a private foundation, most are classified as public charities and are thus eligible for maximum tax-deductible contributions from the general public. *See also 501(c)(3); public charity.*

Community fund: An organized community program that makes annual appeals to the general public for funds

that are usually not retained in an endowment but are instead used for the ongoing operational support of local agencies. *See also federated giving program.*

Company-sponsored foundation (also referred to as a corporate foundation): A private foundation whose assets are derived primarily from the contributions of a for-profit business. Although a company-sponsored foundation may maintain close ties with its parent company, it is an independent organization with its own endowment and as such is subject to the same rules and regulations as other private foundations. *See also private foundation.*

Cooperating collection: A member of the Foundation Center's network of libraries, community foundations, and other nonprofit agencies that provides a core collection of Center publications in addition to a variety of supplementary materials and services in areas useful to grantseekers.

Corporate foundation: *See company-sponsored foundation.*

Cooperative venture: A joint effort among two or more grantmakers. Cooperative venture partners may share funding responsibilities or contribute information and technical resources.

Corporate giving program: A grantmaking program established and administered within a for-profit corporation. Because corporate giving programs do not have separate endowments, their annual grant totals generally are directly related to company profits. Corporate giving programs are not subject to the same reporting requirements as corporate foundations.

DIALOG: An online database information service made available by Knight Ridder Information Services, Inc. The Foundation Center offers two large files on foundations and grants through DIALOG.

Distribution committee: The committee responsible for making grant decisions. For community foundations, the distribution committee is intended to be broadly representative of the community served by the foundation.

Donee: The recipient of a grant. (Also known as the grantee or the beneficiary.)

Donor: An individual or organization that makes a grant or contribution to a donee. (Also known as the grantor.)

Employee matching grant: A contribution to a charitable organization by an employee that is matched by a similar contribution from his or her employer. Many corporations have employee matching-gift programs in higher education that encourage their employees to give to the college or university of their choice.

Endowment: Funds intended to be invested in perpetuity to provide income for continued support of a nonprofit organization.

Expenditure responsibility: In general, when a private foundation makes a grant to an organization that is not classified by the IRS as a “public charity,” the foundation is required by law to provide some assurance that the funds will be used for the intended charitable purposes. Special reports on such grants must be filed with the IRS. Most grantee organizations are public charities, and many foundations do not make “expenditure responsibility” grants.

Family foundation: An independent private foundation whose funds are derived from members of a single family. Family members often serve as officers or board members of family foundations and have a significant role in their grantmaking decisions. *See also operating foundation; private foundation; public charity.*

Federated giving program: A joint fundraising effort usually administered by a nonprofit “umbrella” organization that in turn distributes the contributed funds to several nonprofit agencies. United Way and community chests or funds, the United Jewish Appeal and other religious appeals, the United Negro College Fund, and joint arts councils are examples of federated giving programs. *See also community fund.*

Field offices: Reference collections operated by the Foundation Center in Washington, DC; Atlanta; Cleveland; and San Francisco, all of which offer a wide variety of services and comprehensive collections of information on foundations and grants.

501(c)(3): The section of the tax code that defines nonprofit, charitable (as broadly defined), tax-exempt organi-

zations. 501(c)(3) organizations are further defined as public charities, private operating foundations, and private nonoperating foundations. *See also operating foundation; private foundation; public charity.*

Form 990-PF: The public record information return that all private foundations are required by law to submit annually to the IRS.

General/operating support: A grant made to further the general purpose or work of an organization, rather than for a specific purpose or project; also called an unrestricted grant.

General purpose foundation: An independent private foundation that awards grants in many different fields of interest. *See also special purpose foundation.*

Grantee financial report: A report detailing how grant funds were used by an organization. Many corporate grantmakers require this kind of report from grantees. A financial report generally includes a listing of all expenditures from grant funds, as well as an overall organizational financial report covering revenue and expenses, assets, and liabilities.

Grassroots fundraising: Efforts to raise money from individuals or groups from the local community on a broad basis. Usually an organization’s own constituents—people who live in the neighborhood served or clients of the agency’s services—are the sources of these funds. Grassroots fundraising activities include membership drives, raffles, auctions, benefits, and a range of other activities.

Guidelines: Procedures set forth by a funder that grantseekers should follow when approaching a grantmaker.

Independent foundation: A grantmaking organization usually classified by the IRS as a private foundation. Independent foundations may also be known as family foundations, general purpose foundations, special purpose foundations, or private nonoperating foundations. The Foundation Center places independent foundations and company-sponsored foundations in separate categories; however, federal law normally classifies both as private, nonoperating foundations subject to the same rules and requirements. *See also private foundation.*

In-kind contribution: A contribution of equipment, supplies, or other tangible resources, as distinguished from a monetary grant. Some organizations may also donate the use of space or staff time as an in-kind contribution.

Matching grant: A grant that is made to match funds provided by another donor. *See also challenge grant; employee matching gift.*

Microfiche: Flat strips of microfilm. The Foundation Center collects and makes available foundation 990-PFs on microfiche mounted on aperture cards by the IRS.

Operating foundation: A 501(c)(3) organization classified by the IRS as a private foundation whose primary purpose is to conduct research, social welfare, or other programs determined by its governing body or establishment charter. An operating foundation may make grants, but the sum is generally small relative to the funds used for the foundation's own programs. *See also 501(c)(3).*

Operating support grant: A grant to cover the regular personnel, administrative, and miscellaneous expenses of an existing program or project. *See also general/operating support.*

Orientation: An introduction to available resources and fundraising research strategies presented by Foundation Center library staff. Supervisors at cooperating collections may conduct orientation sessions as well.

Payout requirement: The minimum amount that private foundations are required to expend for charitable purposes (including grants and, within certain limits, the administrative cost of making grants). In general, a private foundation must meet or exceed an annual payout requirement of five percent of the average market value of its total assets.

Private foundation: A nongovernmental, nonprofit organization with funds (usually from a single source, such as an individual, family, or corporation) and program managed by its own trustees or directors. Private foundations are established to maintain or aid social, educational, religious, or other charitable activities serving the common welfare, primarily through the making of grants. *See also 501(c)(3); public charity.*

Program amount: Funds that are expended to support a particular program administered internally by a founda-

tion or corporate giving program.

Program officer: A staff member of a foundation who reviews grant proposals and processes applications for the board of trustees. Only a small percentage of foundations have program officers.

Program-related investment: A loan or other investment (as distinguished from a grant) made by a foundation to another organization for a project related to the foundation's philanthropic purposes and interests.

Proposal: A written application, often accompanied by supporting documents, submitted to a foundation or corporate giving program to request a grant. Most foundations and corporations do not use printed application forms but instead require written proposals; others prefer preliminary letters of inquiry prior to a formal proposal. Consult published guidelines.

Public charity: A nonprofit organization that qualifies for tax-exempt status under section 501(c)(3) of the IRS code. Public charities are the recipients of most foundation and corporate grants. Some public charities also make grants. *See also 501(c)(3); private foundation.*

Qualifying distributions: Expenditures of a private foundation made to satisfy its annual payout requirement. These can include grants, reasonable administrative expenses, set-asides, loans, and program-related investments, as well as amounts paid to acquire assets used directly in carrying out tax-exempt purposes.

Query letter: A brief letter outlining an organization's activities and its request for funding and is sent to a potential grantmaker to determine whether it would be appropriate to submit a full grant proposal. Many grantmakers prefer to be contacted in this way before receiving a full proposal.

RFP: Request for Proposal. When the government issues a new contract or grant program, it sends out RFPs to agencies that might be qualified to participate. The RFP lists project specifications and application procedures. Although a few foundations occasionally use RFPs in specific fields, most prefer to consider proposals that are initiated by applicants.

Seed money: A grant or contribution used to start a new

project or organization. Seed grants might cover salaries and other operating expenses of a new project.

Set-asides: Funds set aside by a foundation for a specific purpose or project that are counted as qualifying distributions toward the foundation's annual payout requirement. Amounts for the project must be paid within five years of the first set-aside.

Special purpose foundation: A private foundation that focuses its grantmaking activities in one or a few areas of interest. *See also general purpose foundation.*

Sponsorship: Affiliation with an existing nonprofit organization for the purpose of receiving grants. Grantseekers may either apply for federal tax-exempt status or affiliate with a nonprofit sponsor.

Tax-exempt: Refers to organizations that do not have to pay taxes such as federal or state corporate tax or state

sales tax. Individuals who make donations to such organizations may be able to deduct these contributions from their income tax.

Technical assistance: Operational or management assistance given to nonprofit organizations. It can include fundraising assistance, budgeting and financial planning, program planning, legal advice, marketing, and other aids to management. Assistance may be offered directly by the staff of a foundation or corporation, or it may be provided in the form of a grant to pay for the services of an outside consultant. *See also in-kind contributions.*

Trustee: A foundation board member or officer who helps make decisions about how grant monies are spent. Depending on whether the foundation has paid staff, trustees may take a more or less active role in running its affairs.

V. What's Out There? Resources for Community-Based Organizations

The following lists were compiled throughout 2001 and may not be up-to-date. Please check the Web sites or other contact information listed with each resource.

✳ **About.com – Nonprofit Management Information**

<http://nonprofit.about.com/cs/managementinfo>

This About.com page offers several links to resources for managing a nonprofit.

✳ **The Foundation Center**

www.fdncenter.org

The Foundation Center's mission is to support and improve institutional philanthropy by promoting public understanding of the field and helping grant seekers succeed.

✳ **Institute for Nonprofit Organization Management (INOM)**

www.inom.org

INOM, based at the University of San Francisco, offers information in several categories related to nonprofit management, including: education programs, research, conference and community programs, and publications. INOM also offers a comprehensive list of nonprofit resources on the Web.

✳ **Internet Nonprofit Resource Center (INRC)**

www.nonprofit-info.org/npofaq

The INRC Web site provides links to articles and sites for fund development, board organization, management sites, and other areas.

✳ **Board Source (Formerly the National Center for Nonprofit Boards)**

www.boardsource.org/main.htm

Provides practical information, tools and best practices, training, and leadership development for board members of nonprofit organizations worldwide.

✳ **The National Network for Collaboration (NNCO)**

<http://crs.uvm.edu/nnco>

NNCO, based at the University of Vermont, seeks to expand the knowledge base and skill level of Cooperative Extension System educators, agency and organizational partners, youth, and citizens by establishing a network that fosters collaboration and leads to citizen problem-solving to improve the lives of children, youth, and families. The Web site offers, tools, resources, and links, as well as an online version of its training program manual, "Collaboration: The Power of WE the People."

✳ **National Network of Grantmakers Common Grant Application (CGA) Form**

www.nng.org/html/resources/cga_table.htm

The CGA form is a labor-saving device for groups seeking grants for social and economic justice work. Check the funder's guidelines on the Web to determine if the CGA is appropriate for your program.

✳ **United Way**

www.unitedway-portage.org/links/nonprof.htm

This local United Way branch in Portage County, Ohio, provides a comprehensive list of online resources for forming and managing a nonprofit.

The Surdna Foundation	<p>One of the foundation's main goals is to prevent irreversible damage to the environment and to promote more efficient, economically sound, environmentally beneficial, and equitable use of land and natural resources. The foundation offers grants to catalytic, entrepreneurial programs that offer viable solutions to difficult systemic problems. It also funds high quality direct service programs that advance its philanthropic goals.</p>			<p>The foundation's grantmaking principles include:</p> <ul style="list-style-type: none"> · Support for government, private and voluntary actions; · A preference for redesign to prevent problems rather than to deal with them after the fact; · A strong interest in building bridges, defusing conflict, and bringing diverse constituencies together; · Encouraging a diversity of people and interests to participate in addressing environmental concerns; · Recognizing the interdependence of sectors and disciplines—support for multi-sectoral approaches and partnerships; · Fostering a population of environmentally informed, responsible, activist citizens; · Respect for the community and grass-roots perspective. 	<p>Edward Skloot, Executive Director Surdna Foundation, Inc. 330 Madison Avenue, 30th Floor New York, New York 10017-5001 Phone: 212/557-0010 Fax: 212/557-0003 E-mail: request@surdna.org Web site: www.surdna.org</p>

Region 6 Proyecto Agricultura Sostenible	Undertaken by the National Center for Appropriate Technologies to reduce exposure of low-income, Hispanic-American farm families and farm workers in the Texas panhandle to hazardous agricultural chemicals.	Yes		<p>Learning and practice methods will include farm demonstrations, workshops, and farmer-to-farmer exchange about successful production and market methods.</p> <p>Grant: \$236,442 in federal funds.</p>	Joy Tibuni E-mail: tibuni.joy@epa.gov	
Region 8 Alamosa River Watershed Project	Addressing concerns such as channel stabilization, riparian habitat restoration, water quality, and noxious weed control in the San Luis Valley, which has a strong Hispanic heritage.	Yes		<ul style="list-style-type: none"> • Funding for a watershed committee coordinator for four years from EPA and other sources. • Two demonstration projects installed in 1996 to test different channel stabilization designs. Local contributors funded the demonstration projects. • Production of a 15-minute video describing the Alamosa River Watershed Project. • River channel modification permits from the U.S. Army Corps of Engineers. 	Jeff Stern Conejos County Soil Conservation District P.O. Box 255 La Jara, CO 81140 Phone: 719/274-5868 Fax: 719/274-4312 Web site: www.epa.gov/region08/community_re_sources/steward/fact/ala.html	
Region 8 Colección en Espanol (Spanish Collection)	List of EPA Region 8 resources in Spanish.	Yes		The Los Angeles project involves a cooperative effort between Mothers of East L.A.-Santa Isabel (a local community group), the American Lung Association, and the city of Los Angeles.	Web site: www.epa.gov/Region8/library/collect/espanol.html	
Region 9 Childhood Champion Pilots	Region 9 has two pilot projects, one in Los Angeles, California, and one in Nogales, Arizona. Both focus on asthma and the use of education and outreach tools to help children and parents (often Spanish-speaking) understand asthma and how to limit school absences due to asthma.	Yes		The Nogales project pays for "promotoras"—locally known, Spanish-speaking home health care workers—to visit the homes of families with asthmatic children and help reduce exposure to asthmagens.	Clarice Caylord Phone: 619/235-4767 Web site: www.epa.gov/Region9/cross_pr/childhealth/status.html	More information about Childhood Champion Pilots: www.epa.gov/children/whatwe/comm.htm
Region 9 Farm Worker Safety in San Luis Obispo, California	The Environmental Center of San Luis Obispo (ECOSLO) is working to minimize environmental health risks facing farmworkers.	Yes		The project aims to improve communication and coordination among farmworker support groups and the county's environmental health stakeholders. The California Department of Health Services and community health workers from Promotoras Comunitarias and Head Start will survey 200 farmworkers and their families. The project will determine the impact of California's Worker Safety Regulations on farmworker health. Survey participants will	Raymond Chavira Phone: 415/947-4218 Katy Wilcoxen Phone: 415/947-4205	Web site: www.epa.gov/Region9/cross_pr/childhealth/status.html

Region 9 Site Assessment in Response to Cancer in Children	McFarland is a small, largely Hispanic, agricultural community in California's Central Valley, with unusually high cancer rates in children.	Yes		EPA is sampling and analyzing drinking water, soil, and air for releases of hazardous substances associated with past industrial and agricultural practices. EPA will determine current environmental conditions and identify any issues that may be of concern to children's health. Air monitoring will begin this year.	Mark Calhoon Phone: 415/972-3090 Elizabeth Adams Phone: 415/972-3183 Web site: www.epa.gov/Region9/cross_pi/childhealth/status.html	
Region 9 Pesticide Education for Farmworker Families	Campesinos Unidos, a community action group representing 6,000 migrant farmworkers, has received an EPA grant to provide pesticide education to farmworker families living in Imperial County. Their goal is to help farmworkers prevent contamination of their homes and exposure of family members, particularly children, from pesticides used at their workplace.	Yes		Trained "Promotoras" provide individual and group education to 200 families at risk for pesticide poisoning and help parents increase their skills in monitoring their children's health through increased awareness of pesticides and hazardous chemical exposures.	Clarice Gaylord Phone: 619/235-4767 Web site: www.epa.gov/Region9/cross_pi/childhealth/status.html	
Region 9 Asthma Training for Border Schools	The American Lung Association of San Diego and Imperial Counties has an EPA grant to conduct asthma education for children along the United States/Mexico border.	Yes		Training: Open Airways for Schools will hold training in 15 low-income schools in San Diego and Imperial Counties. The grant also will build capacity for similar programs in Mexicali.	Clarice Gaylord Phone: 619/235-4767 Web site: www.epa.gov/Region9/cross_pi/childhealth/status.html

Office of Pesticide Programs (OPP)	<p>"Read the Label First" materials in Spanish.</p> <p>Hispanic radio broadcasting targeting Latino farm work populations.</p> <p>Mentor Program for Children of Farm Workers: Grant project to research the best ways to forge a bond between the children of farm workers and Hispanic and other professionals to enhance the educational and economic opportunities available to these children.</p>	<p>Yes</p> <p>Yes</p> <p>Yes</p>		<p>Pamphlets describing the importance of reading labels on pesticide products are available in Spanish. Bumper stickers and posters also are available.</p> <p>Sponsored by OPP and EPA's Worker Protection Branch, these radio spots provide information on pesticide safety and risk reduction measures. They also offer a toll-free number for questions.</p> <p>This research project assigns 50 trained student mentors to 100 farm worker children. Mentors use outreach tools to raise the children's awareness about pesticides and means of reducing exposure. The project developed outreach materials, developed mentor training, designed tracking methods.</p>	<p>OPP Health Effects Division Margaret J. Staskowski Phone: 703/305-7351</p> <p>Edward Zager Associate Director Phone: 703/305-7351</p> <p>Randolph Perfetti Phone: 703/305-7351</p> <p>Web site: www.epa.gov/pesticides</p>	
Hispanic Farm Worker Safety Training Program		Yes		In collaboration with the Farm Worker Health and Safety Institute and the Association of Farm Worker Opportunity Programs, the program provides basic worker pesticide safety training to Hispanic agricultural workers. EPA has created a wide variety of Spanish-language safety training manuals.		
Pesticides and National Strategies for Health Care Providers		Yes		The initiative is aimed at ensuring that health care providers become more aware, better educated, and better trained in pesticide related health issues. 2.5 million Hispanic farm workers will be better served due to this initiative.		
Border Health Project, in collaboration with the Centers for Disease Control		Yes		<p>The project is working with four U.S. states and six Mexican states along the border to conduct various projects, including those involving:</p> <ul style="list-style-type: none"> • Lead and pesticide intoxication among children. • Elevated rates of neural tube defects. • Training health care providers. • Mapping of environmental contaminants. 		

Resource/ Organization	Description	Educational Resources Available?	Funding Available?	Opportunities	Contact Information	Additional Links/ Branch-off Resources
Office of Pesticide Programs (cont'd)	Sentinel Event Notification System for Occupational Risk	Yes		In collaboration with National Institute for Occupational Safety and Health, the program works with six states to conduct monitoring of pesticide intoxication cases and investigate large outbreaks.	OPP Health Effects Division Margaret J. Stasikowski Phone: 703/305-7351	
	Recognition and Management of Pesticide Poisonings	Yes		Medical outreach activity is provided to educate health care providers about the diagnosis and treatment of pesticide intoxications. Recognition and Management of Pesticide Poisonings text is now available in Spanish.	Edward Zager Associate Director Phone: 703/305-7351	
	National Web site in Spanish	Yes		OPP's Certification and Worker Protection Branch is developing a national Web site with full access in Spanish for information on worker safety, certification and training of pesticide applicators, and outreach to health care providers.	Web site: www.epa.gov/pesticides	
	NAFTA Technical Working Group on Pesticides	Yes		The working group is a collaboration with the Canadian Pest Management Regulatory Agency and a consortium of Mexican pesticide regulatory agencies to develop a coordinated pesticides regulatory framework among NAFTA partners. The focus is on strengthening the regulatory capacity of Mexico.		
	U.S./Mexico Pesticide Information Exchange Program	Yes		The work focuses on pesticide regulations as well as technical and science issues, with an emphasis on transborder projects. Training workshops are held on applicator certification, worker protection, and groundwater contamination. More than 300 regulators and stakeholders have participated.	EPA, Mexican Ministry of Environment, National Resources and Fisheries, and the Canadian Ministry of Environment work to foster regional cooperation on conservation, protection and enhancement of the North American environment.	Action plans were created to reduce the use and presence of DDT and chlordane through the region.
	North American Commission for Environmental Cooperation	Yes
