The first responder program that surpasses all the rest

The National Safety Council First Responder program offers the most authoritative first aid training on the market. This program exceeds the current Department of Transportation National First Responder curriculum. The course delivers the latest cardiopulmonary resuscitation (CPR) and emergency cardiovascular care (ECC) guidelines essential for all emergency response teams and health care providers.

What you'll learn

- Patient assessment, childbirth and how to assist infants and children
- Airway and breathing emergencies, ventilation devices and oxygen
- Cardiac emergencies, CPR and automated external defibrillation (AED)
- Illness and injury including medical emergencies; bleeding and shock; soft-tissue injuries; and muscle, bone, head and spinal injuries

Course description

Each year, as many as 250,000 people die of heart attacks before they reach the hospital. This First Responder course helps you learn what it takes to save a life. You'll also cover EMS response and operations, and address mass-casualty incidents and triage.

Course materials
