Superior CPR and AED training methods improve CPR skills retention

Bystander CPR provided immediately after cardiac arrest can double a victim's chance of survival. The National Safety Council cardiopulmonary resuscitation (CPR) and automated external defibrillation (AED) course equips students with basic life support skills to handle choking, breathing and cardiac emergencies, including using an AED when every second counts.

What you'll learn

- Taking action in an emergency
- Assessing the victim
- Cardiac emergencies
- Basic life support, including airway management, breathing and circulation
- Using an AED

Course description

In addition to meeting the most current CPR and emergency cardiovascular care guidelines, this 3 1/4-hour course teaches skills using the most effective training methods. The Video-Self-Instruction (VSI) method has been proven to enhance learning. VSI is included on the DVD that accompanies the Student Workbook for reference and skills retention.

Course materials

Student Workbook

- 32 pages with full-color photographs, illustrations and skill demonstrations
- Course DVD with VSI training
- Nationally recognized course completion card

Who would benefit

- Emergency response teams
- Firefighters
- Athletic trainers
- Safety personnel
- Police officers
- Airline employees
- Supervisors
- Ambulance drivers
- Lifeguards

CPR and AED Skills Card

Eight-panel, full-color, laminated Skills Card provides a convenient, quick review of CPR and AED skills. It is available with a course completion card for individuals who have completed an NSC CPR and AED course and are looking for refresher training. Or, the Skills Card is available without a course completion card for use as an employee handout.

Topics include:

- Acting in emergency situations
- CPR for adults, children and infants
- Preventing disease transmission
- Choking
- Checking the victim
- Recovery position
- Using an AED
