

PTO SAFETY

Farmers know the power-take-off (PTO) permits him to harness the power of his tractor engine to drive a variety of machines. It is just as important today as it was when it was first introduced. However, a health respect for the PTO driveline's potential for causing injury and death is needed.

- Keep all PTO shielding (including the master shield) in place.
- Repair or replace damaged or missing shields.
- Stay safely away from unshielded moving parts.
- Watch your step when walking or working around a running machine.
- Wear work clothing with no loose ends or strings to catch on or be caught by machinery.
- Keep long hair under a cap or tied back to prevent it from being caught by the machinery.
- Keep children and non-workers out of the danger zone.
- Stop the PTO when dismounting from the tractor.

Inspection

Is the PTO shaft shielded?

Is the master shield in place?

Is the stub shaft shield available and in use when the PTO is not in operation?

Is the PTO shielding damaged?

Is the PTO shaft shield working properly?

Are all workers wearing proper clothing?

Is long hair tied back or under a cap?
