With Lasers, the Focus Should be on Safety!

**Worksite Safety Practices**

- A laser should be isolated from public areas; doors should be closed or locked to keep out unauthorized personnel
- Post proper warning signs
- The laser should be set up so that the beam path is above or below normal eye level (below 4.5 ft. or above 6.5 ft.)
- Install warning devices for lasers with invisible beams

**Laser Safety Practices**

- Before operating the laser, warn all personnel and visitors of the potential hazards
- Avoid looking into the primary beam and the pump source
- Do not wear bright, reflective jewelry
- Use proper eye protection when working with a Class 3B or Class 4 laser

**Always keep a sharp focus on safety**
