## 23 METALWORKING MACHINERY

## **CASE STUDY**

Grand Metalworks specializes in architectural metalwork, from basic fences and gates to custom furniture. Tony Altiri, the shop manager for the past 15 years, has been spending time with the new safety and health manager, Patti Anderson. Between his years of experience and her fresh ideas, they hope to keep the company running productively and safely.

1.	Patti asks Tony what he considers the two most important areas of safety for the machine operators.
	What did he answer?

2. She asks him if he has any rules that cover the first item. What would those rules be?

3. What would be covered under Tony's second item?
