RepScrubs® - Surgical Attire Control with Vendor Credential Verification

Healthcare facilities depend on medical vendors to support critical procedures, yet managing those vendors once they enter sensitive clinical environments has historically been difficult to standardize. Credentialing, check-in, surgical attire distribution, policy enforcement, and activity tracking are often handled through separate systems and manual processes, creating gaps in oversight, unnecessary demands on hospital staff, and potential infection-prevention and compliance risks.

RepScrubs® was designed to close those gaps by transforming vendor access into a coordinated, measurable safety program. Its integrated platform connects credentialing verification, facility-specific check-in requirements, controlled surgical scrub dispensing, automated access restrictions, vendor education, reporting, and ongoing program support. Hospital policies are built directly into the vendor workflow, creating clear expectations and consistent safeguards before a representative enters an operating room or procedural area.

The impact is both measurable and scalable. At individual facilities, vendor compliance has increased from approximately 47 to 60 percent to as high as 97.8 to 99 percent, while reducing the need for staff to manually monitor and enforce requirements. Across its national network, RepScrubs® supports more than 1.8 million controlled vendor visits annually at over 950 healthcare facilities, serving more than 77,000 registered vendor representatives.

By bringing visibility, accountability, and consistency to an historically fragmented process, RepScrubs® is helping healthcare organizations strengthen safety while allowing clinical teams to remain focused on what matters most: patient care.
